a Tomato: FEM vs Hertz vs measured
Hertz, two contacts
FEM 4000 Hz / 250 it
FEM 1000 Hz / 120 it
measured, red (ince16)
measured, green (ince16)
plate stiffness 4-20 N [N/mm]
whole-fruit modulus E [MPa] (tomato_mech)
b Avocado: FEM vs Hertz
secant stiffness at 4 N [N/mm]
FEM (final run, test_reports)
Hertz (food/sdt.py, R 33 mm)
FEM probe run (renders/avocado_squeeze_conv.log)
ripeness stage (1 hard .. 5 ripe)
c Roll: convergence with solver rate
FEM 1000 Hz / 120 it
FEM 2000 Hz / 200 it
register model k = 0.29 E / 20 kPa
incremental stiffness 1-3 N [N/mm]
crumb modulus E [kPa] (by roll age)
